Abstract

Spatial Characteristics of Telephone Booths in the City of Riyadh.

This study is concerned with the existing telephone booth network in the city of Riyadh investigating such aspects as the distributional pattern density distance travelled to the nearest telephone booth.

The distribution of telephone booths has also been investigated in relation to a number of variables including population density, shopping centres and service institutions.

The study has also analyzed the degree of satisfaction of residents of Riyadh city concerning accessibility to telephone booths.

Finally, the study has concluded by putting forward certain recommendations, the objective of which is to improve on the overall performance of the telephone booth network by offering high quality services to the residents of Riyadh.
